

## Get more from your data protection with a Backup and Replication Health Check

Is your data protection working as hard as it could be and does it still provide adequate security for your growing business? A DSI Health Check is the quick and easy way to find out.

### Does your Backup Solution need a Health Check?

Has your organisation recently assessed your data protection environment to ensure you're adequately protected and that you are benefitting from its full capabilities? In today's fast paced business environment, changes are constant. The chances are that your business objectives, processes or technical environments have changed since you initially installed and configured your data solution. Now is the time to ensure your organisation is adequately protected.

### Maximise the Power of Your Data Protection Solution

Customers rely on DSI to give them confidence that their data is secure, protected and available. But as with any technology solution, a periodic check to ensure everything is working properly is not only a good idea, but also an excellent business practice. Our solution engineers have assisted many of our customers by optimising their data protection environment and giving them the confidence that their data is safe. Based on our extensive experience our Health Check Services have been designed to give you and your organisation that same peace of mind. Our comprehensive Health Check examines the following:

#### Alignment of Business Objectives with Potential Risks

One of the key steps in performing our Health Check services is to review your organisation's data protection strategy. Implementing a technology solution is only part of the battle. Often the hard work comes in ensuring the technology solution is aligned with the business objectives. During the Health Check engagement, our solution engineers will work closely with your organisation to understand your business objectives, risk profiles and data protection requirements so that the solution can be evaluated against the business needs. What disaster prevention methods are currently deployed? How robust are those methods and processes? It is also important to identify any constraints that are impacting the growth of your business. DSI Health Check Services will lead you to a better understanding of how improvements in your data protection environment will have a positive impact.

#### Comprehensive Review with Key Members of Your Organisation

A DSI Health Check is more than just a report. It is an opportunity for your organisation to understand the latest in data protection. We spend every day interrogating data protection and ways to help our customers ensure their solution is fulfilling their business requirements.

### Health Check Engagement Overview

Our consultant will meet with key personnel involved with your data protection environment to gather information. Utilising a combination of workshops, meetings and interviews, your current environment will be discussed and key areas will be identified for further investigation.

Following the discovery phase, the consultant will either be on-site to finish gathering information, or working remotely to prepare the report that details final recommendations and strategies.

### Deliverables

As part of our Health Check engagement, our solution engineers will review our findings as well as provide valuable insights on:

- Current trends in backup products and infrastructure development
- Proven methodologies to drive improvements in your data protection strategy and implementation
- Information on the latest products relevant to your environment
- Performance tuning or optimisation where applicable
- Proven backup and restore performance tests

### Health Check Services Include

- Aligning business objectives with potential risks
- Assessing your current solution implementation
- Profiling current hardware, software, operations and procedures in use
- Understanding what critical applications are deployed and need protection
- Reviewing the infrastructure design and how it is meeting your needs
- Providing technical and process improvement recommendations
- Discussing current areas of concern or poor environment performance
- Discussing future growth plans and your business continuity needs
- Sharing best practices from industry leaders
