

## *Futureproof with an IT Infrastructure and Technology Refresh Assessment*

The IT infrastructure is the foundation for the data centre and application environment of all the company's critical business information. Many companies have a sizable investment in this area, few have gained the full potential of their investments and many companies are still underutilising their server capabilities and not taking advantage of cloud computing.

Our offering will give clients who are planning on upgrades, or in the process of consolidating their system valuable guidelines and critical success factors for achieving the benefits they are seeking, staying within budget, and achieving desired goals.

### Description

Our Infrastructure and Technology Refresh (ITR) Assessment is a service that helps you to manage change. It provides you with the freedom and flexibility to replace, upgrade or add to your IT systems. DSI assist our clients in understanding the changes and benefits of new infrastructure solutions and then being able to implement these changes based on sound business practices and benefits to the overall organization.

The ITR Assessment provides a fast and efficient assessment and analysis of the current IT environment and process maturity capabilities and provides:

- An assessment and evaluation of the current IT infrastructure environment and capabilities, and alignment with best practices where possible
- A gap analysis comparing the current IT infrastructure solutions to best practices and recommendations for improvements

### Health Check Service Includes

DSI provide an end to end service which includes:

- Procurement
- Storage
- Configuration
- Asset management
- Data migration
- Installation
- Decommissioning
- Refurbishment
- Disposal in accordance with Weee directives

Our consultants have expertise in working with both large and small complex organisations to achieve the maximum benefits for their client's IT organisation.

### Health Check Engagement Overview

Our Consultants will deliver a report that includes the above deliverables and present the findings to our client's management.

Work may be on-site or off-site and is conducted as follows:

- Work is on average two to three days for data gathering and assessment and one day for presenting findings in an interactive session. This does depend on the size of the customer's environment
- DSI assumes the client has readily available inventory, prices and costs of all areas or will send to DSI within 2 business days upon request
- DSI will present findings and recommendations in a time frame agreed with our customer and after receipt of all information/data from the customer and present to management or as required

### Deliverables

Our service offering delivers the following results:

- An assessment and evaluation of the current IT infrastructure environment and its related application production and development support systems as well as data storage, disaster recovery capabilities and process maturity
- A review people, process, hardware technology and data centre facilities to provide an overall view of the IT infrastructure and its capabilities
- A gap analysis comparing current IT infrastructure solutions to best practices and recommendations for improvement

### Target Audience

IT executives and Senior Management who are responsible for IT strategy and core infrastructure systems across the enterprise. This assessment will allow them to be assured that their IT investments yield the expected benefits. It will also improve alignment between the IT function and the business.
